No 38 The Convulsive or Spasmodic

State of Fever.

many fevers occur with Convulsion
particularly in Children. They always
indicate great force of Stimulus, or great
irritability of the whole nervous
System. They acquire & generally
yield to V.S. — Cool Air — purge
& L. Land: — Cool Air very proper in
the small pox — instead of hot water.

Spasms are of two kinds tonic
& clonic. The first are constant, the
last alternate with relaxation. The
Spasmodic States of fever are of the
clonic kind most generally. Some of
them both as Tetanus.

The 3 Diseases which belong here are 1 Hooping Cough. 2d Tetanus 3 Hydrophobia. ——

The Hooping Cough —

is from ~~Cont~~ the Stimulus of Contag-gion. It affects the Trachia & Lungs with a Convulsion. It is often attended with Fever. The pulse - suffusion of the eyes Face, & hæmorrhages all indicate. 1 Vs. — 2 purges especially of Cal: & Rhub: 3 Vomits. 4 Cold Air. ~~5~~ 5 Blisters - pitch plasters. 6 fear. Riding on a Bear. —

Tonics. 1. Oper: Line - Sal: Saturn. Inject: asafœtid

2 Cold Bath - 3 Exercise.

Tetanus

It is produced by all the causes of fever, more especially cold & fresh miasmata. It ~~occurs~~ is a misplaced fever. It occurd in the year 1793 in many cases. I shall read you Dr Pisdlestone's Acct of it in the East Indies.

2 It occurs from wounds. ~~3 Lecture 18~~ ~~&~~ read no: 9. p 392 - omitting - 2nd: from cold.

The Remedies shd be varied with its remote & exciting causes. —

~~It~~ It has its precursors - viz stiff neck pain in the back - Startings &c - here a moderate stimulus cures before violent action occurs - If from a wound - shd be dilated & inflamed.

action & morbid excitement thereby
abstracted from the muscles & law to
which it is visited by its having no
antagonist muscles - or in other words
by greater predisposing debility than
any other muscle in the body. —
The matters to excite inflam[n] the be
Tupent: Salt - Canth: or lubelia:
I have used them all. —

The Remedies ~~after this~~, are the same

killing in 1.2 or 3.4.5 days like ~~those two~~
malignant fevers. 3 From the symptoms
being exactly the same as those which
occur in malignt fevers. Those according
to Dr Bothergill are, small quick - tense - hard
irregular pulse - cool skin cold & clammy hands -
- sweating - thirst - palpitation of the
blindness - syncope - aesthesia.

fevers in the human species ch tho' generally are not universally contagious. In these cases the disease is not propagated by biting, lamb

+

V The following symptoms are taken notice of by Dr Mead "Coma ~~other authors~~ "intermitting pulse - cold sweats - great sensibility to cold air - and heat in the Urine" - all of which occur in the malig State of fevers. the sensibility to cool air often continues for 2 or 3 days in the yellow fever. "giddiness sighing, tossing, red face, fury, hiccup" by Dr Plummer med: Ess: Vol: 6. see Ausilianus p: 220 for symptoms

+ many people escape it who are bitten by dogs that are evidently mad. That canine madness is nothing but a fever in-duced by the common causes of fever I infer from its symptoms, such as great heat - redness of eyes - Delirium - mania, and from its causes by a peculiar contagion, hence of aliment - & it prevails at the same time with malignant & contagious fevers. Dr Hufham tells us that when a

heart - wakefulness - delirium - keen eye - white
tongue - costiveness - contraction of the
Sensorium, & involuntary emission of
semen - inflam^y blood with yellow
fever." - In a case of Hydrophobia
which came under my notice this win-
ter 1797 I found the pulse uncommonly
tense, such as often occurs in the
yellow fever. I have called it ^{c/y} Iron pulse.
at the time I was struck with this
uncommon force in the pulse, I did
not know, or suspect that my patient
laboured under Hydrophobia. I bled him.
his pulse was lizy & cupped. He died
the 5^t of his disorder
next day in Convulsions. — He had
been bitten 3 weeks before by a mad
Dog on his temple, but of this I was

pestilential fever ravaged Plymouth,
Many
Mad Dogs were running about". Dr
Anders tells us that During the
prevalence of the plague in Rusia in
1770, Mad Dogs were very numerous.
"In the years 1789 Says a Dr
when the Angina maligna ravaged
several parts of Yorkshire, and an epi
a disease prevailed among the Dogs in
eh
W: some of them run about as if mad,
others staggered as if they were apoplectic,
first in others, the disease shewed itself in
its proper colors. These last had Bubo's
in the Axilla, & every mark of pestilence,
& frequently died within 24 hours from
the first attack, the malady was evidently
contagious, for if ever so many were
confined in the same place, hardly any
escaped. In this Complaint, the poor animals
had red eyes, & a remarkable fierce look,

not informed Until after his death.
In Med: Comm: Vol. 9: p: 342 we have
an acc[t] of heat - thirst - & nauseas the
last attending this disease. The last
Symptom belongs to malign[t] fevers. The
absence of fever is mentioned by some
Authors, but this in these cases it is
only misplaced as in the malig[t] fevers in
which similar mistakes have often
been made. Dr Baumgarten mentions
priapism as a Symptom of Hydrophs.
- now this belongs to malig[t] state of fever.
3 From death coming on in the same
way as in malignant fevers - viz cold
sweats - weak pulse, & involuntary dis-
-charge of Urine. 4 from the speedy
which increased following death, as in malig[t]
fevers where no depletion is used. 5 from

which is characteristic of the plague in the human Species, & it appears to me says our author, very probable, that the same disease w^ch Sydenham & Huxham without examining it, have recorded as facts."

To these observations I shall only add under this head, that not only the plague, & angina maligna, spread in common among men & Brutes, but the Influenza, & bilious fever. Dr Cooper.

It is no more extraordinary that a fever inspired by the contagion of Saliva of a rabid animal shd produce aversion from water, than that the fever produced by the any other cause should produce an aversion to many kinds of aliment, or to light - cool air, or sounds of any kinds. There are contagions w^ch produce this symptom as well the Saliva of a mad dog. Typhus fever. Scrotter animal.

the appearances exhibited after death in
in bodies wh have perished by this disorder.
These are Inflamn of the throat Oesophagus - Sto=
=mach Liver - bowels & brain, & above all fluid blood
in the Arteries. ~~The last appearance occurs in all the malign States of fever.~~
~~Inflammation's~~ To these appearances morgagni
adds - ~~yd~~ blood in some instances black -
& yellow Serum in the blood Vessels - Strong
marks of effusion, & Congestions in the
lungs - ~~Jaun~~ Black Bile in the Stomach
& gall Bladder - the Bladder & penis infd. -
- gangrene in the bowels & livid spots
on the external surface of the Skin.
Now all these appearances occur in
persons who have died of fevers of the
highest grade of Malignity, or inflam
Action. - One exception - no Inflam in - from each of
I conclude therefore that the
morbid Action.

is likewise produced by drinking cold water, 2
& all the cases formerly mentioned of w:
is called the Spontaneous Hydrophobia.
In my Lecture on this Subject last year 1799
I said I was so satisfied that the disease
in the Dog which disarranges his
~~Dessending~~ & renders his Saliva ~~the worste~~
morbid & infectious
~~cause of a fever~~, is a real fever, that I
took for a time when remedies should be
applied with success for ~~the prevention of~~ cure of it,
and thereby the death of a faithful &
useful Animal cease to be necessary in
order to prevent its spreading among men.
1798
— But that time is come — I have lately
heard of two Dogs being cured of this
disorder by a Remedy to be mentioned
presently.

Hydrophobia is a malignant state of fever, from stimulus. Of course the cure ~~Remedies~~ shd be the same as for malig: making ~~all other causes,~~ ~~allowing~~ fevers. ~~for~~ for this disorder ~~Remedies~~ ~~alterative~~ ~~Aloes~~ themselves

The ~~Remedies~~ divide ~~itself~~ into two kinds ~~stages~~.

1 ~~The prevention~~ Such as are proper to prevent the disease. —

2 Such as are proper to cure it when formed. —

1 — The first remedy under the 1 head is abstracting, or destroying the Virus. This is done, by cutting, or burning out the wounded part. or 2 by long, and frequent affusions of water upon the wound in order to wash the poison from it. ~~That~~ The small pox has

√ the wound should should be kept
open & running for several months.
In this way a washer woman escaped
the disease, who had bitten by the
same ~~cats~~ Cat which the gentleman
whose case is described by Dr Holbrook.
Dr Preston of Jamaica relates two
cases of the disease being prevented
by the same means. That the infection
was communicated he infers from
two sheep that were bitten at the
same time, & by the same mad dog,
having taken & died of the disorder.

been prevented by Jno Hunter by cutting
out the part in which the puncture was made
in the arm with various results. There
can be no reason, why the same practice
should not succeed, if used in time in the
Hydrophobia. Authors tell us it has some-
-times failed, probably because it was used
after the poison had contaminated the
blood. — V

A 2 preventive - is low diet - such as is
recommended to prevent, or miti-
-gate the plague, and yellow fever. The
System in this case, like the willow
shrub bends beneath the force
of the stimulus of the poison, and thereby
prevents its being broken at a future
day. If it were pofible to prescribe a
diet which would transcend the force

V They have derived their credit from some of the following circumstances accompanying the bite of an animal.

1 The Animal may have been angry, but not diseased with a fever malignant fever in the manner I have described.

2 He may have been diseased, but not to such a degree as to have rendered his Saliva infectious. 3 The Saliva may have been so washed of in passing thro' the patients Clothes, as not have entered the wound made in the skin.

4 There may have been no predisposition in the patient to receive the fever. This is often seen in persons exposed to the Contagions of the plague, yellow fever, small pox, & of the infection of the Jail & venereal disease.

of this disease, it shd be prefered ~~to inoculation~~ ~~vomiting~~ the bilious or jail fever, but this being impossible, we must weaken the disease, by weakning the system.

I shall say nothing here of the long Catalogue of medicines which have been used to prevent this Disease. No one of them I believe has done any more good, than the remedies for eradicating the Gout, or the Elixirs which have been used to promote old age.

The interval between the infliction of the Attack of the disease is various. From 15 days to 5. 6. 7, and even 11 months. It most commonly comes on in 40 days.

The Small pox, measles, plague and Yellow fever are subject to a similar variety, but upon a smaller scale.

V ~~From faithful inquiries, I have satisfied~~
~~myself~~ where the disease occurs many
years after the bite of a rabid animal, I
am disposed to ascribe it to other causes,
& chiefly to fear. —

From many inquiries I am satisfied,
that the disease cannot be communicated
by the Saliva except it be infused into a
wound, or applied to a part covered with
a thin Skin as the lips. much less can it
be communicated by ~~the bo~~ handling the
blood, or the ~~dead~~ body of a person who has
died with the disorder. In many cases
have been
by the negroes
cases eaten with Safety that had been killed
by the bite of a mad dog, and the milk of
by the negroes
a Cow has been used without any inconve-
nience following it, by a whole family,
on the day on which She was seized with
this disease, & which killed her in a
~~from the~~
few days. —

V 19

During the ~~intensel lectu~~ use of y^e preventing remedies, the utmost pains shd be taken to keep up our patients Spirits, by inspiring him w: th Confidence, ~~in the~~ in the Use of those remedies.

11. Should we called (as we generally shall be) where these remedies have not been used, or shd the disease appear in spite of their use, our ~~no~~ first remedy Under the 2nd head should be

1 Vs. _ all the facts which have ~~no~~ been mentioned relative to its ~~fo~~ cause, ~~and~~ symptoms, & the appearance of persons who have died of this disease & all the cases which have been made of malig: =nant fevers from other causes, con: =spire to enforce the use of the Lancet in this disease. To be effectual, it

should be used as in the malignant
States of the plague, yellow fever, small
pox & gout. ~~Apoplexy~~ from 100 to 200 Ounces
of blood will probably be necessary to
effect a Cure. The pulse, ~~Head~~ Shoulder
govern the Use of the Lancet here as in
Other cases of fever. ~~The~~ This practice
Gent: ~~tho~~ is founded upon ~~the~~ our reas:
:nings upon the nature of this disease.
But it does not rest wholly upon them.
There are several cases upon record in its favor
In a London magazine published About
the year 1752 there is an Acc:t of a young
woman who discovered Symptoms of
Hydrophobia from the bite of a mad dog. ~~Her~~ Her friends proposed to
send her to a mad house. To prevent
this, she ran hastily down a pair of
Stairs, at the foot of which she fell,

The 2nd case in favor of V.S. is mentioned
in the 48th Vol: of the transactions
of the Royal Society of London. a
man in whom the disease appeared
with all
in its usual symptoms was perfected
by the loss of 180 Ounces of blood by
repeated bleedings.
These two recoveries from by copious
blood letting are sufficient to establish
its use. But there are others. Dr Vassillac's
Mr Volney's they are the only two cases upon
record of genuine strongly marked
Hydrophobia from the bite of a
rapid animal, ~~being cured by~~ having

death by the loss of ℥xx of Blood by accident, in Dr Plummer's pat: Med: Ess: Vol: 6 a Spontaneous Case cured by the Loss of ℥16 of blood in Med: Ess: Vol: 1 by Dr Innis. Dr Wigan a Cure from two Vs: & Leeches Sweating. Brooks Practice. Vol. 11. p: 149. +

[V Baumgarten says it has never been cured but by evacuations of some kind. He says Sweating has sometimes cured it. Quoting Dr Dewar Medicum: vol: 2 p: 176 — Inducing vitual vomiting Dr Wallis — p: 199.

+ The same remedy has succeeded in two Dogs. Dr Cooper's by cutting his tail. — & Dr Jardine's by cutting his ears, whereby a plentiful discharge of blood was induced. —

of the System in Other diseases may be
used with Vs., except cold water. This
by exciting painful emotions may en-
-crease the Disease. A Salivation should
be attempted, and after Vs. it ~~with~~ may
more easily be excited than where it
has not been used. — It will act by
depleting, as well as promoting, a new
and less dangerous Action in the Vessels
of the throat. ~~V~~

It is probable, many new Symp-
~~After the System is~~
-toms may be induced. In the System
by this new mode of treating this dis-
-order, but after ~~in~~ you have found
of the changes ~~wh~~ different remedies
produce in the treatment of Other
Diseases, you will not I hope be
deterred in the use of those I have recom-
-mended in

V I formerly pointed out the analogy
between Tetanus & Hydrophobia. I
confined this analogy to their cause
viz Debility, & their cure as far they
both required tonic Remedies. I have
now extended it to previous depletion
in both diseases, before the exhib.n
of tonic remedies. —

the Hydrophobia.

After the ~~hydrocar~~ morbid action of the
System is sufficiently reduced, tonic medi-
cines should be given. These shd be Bark
Wine, Opium + Brightson cotts it. Nourishing & cordial
diet, and perhaps the Cold Bath. V

The new method of cure pract.
has many things to recommend it.
It accords with the Unity of disease,
and ~~the heterogeneity~~ of the remedies ~~treating~~ it which
we have established & adopted in
all other cases with so much success.
I should as soon expect to find
the inhabitants of a new Island de-
void of
in whom I discovered the Shape & gestures of men
to be devoid of reason, as expect to find
any new disease destitute of all the

V I have often complained of the
imperfections of the present nomenclature
of Medicine. The mortality of the
consideration has increased
by its name. The terms Hydrophobia
& canine madness convey ideas of
the symptoms of the disease only,
and of symptoms too that are by
no means uniform. If the theory I have delivered
& the practice I have recommended
be just, it ought to be called, the
Hydrophobic state of fever. This name
will at once associate it with all
the other states of fever, and leads us
to treat it with the remedies that
are proper in fevers varying them con-
-stantly with the varying state of the System.

properties of those Diseases with which we are
acquainted, for disease is as much a
Unit as the body or mind of man. —

2 In favor of an attempt to cure by:
Hydrophobia by the remedies that have
been mentioned, we shall have this
consolation, that we shall do no
harm by using them if they should
fail of success. for death is the
inevitable of the disease when left
in the hands of Nature. V

~~I have often complained of the~~
~~want of a new nomenclature in Medi-~~

With respect to Hydrophobia from
Other causes than the bite of a rabid
Animal Animal, it must be treated
is the same — only partial
according to the Nature of the disease
of which it is a Symptom. If it

General — see p. 27.

arise from sleeping on the cold & damp ground, let it be treated like the all the Other morbid affections from the same cause. If from a wound in a tendenous part by the same remedies that cure recommended for Tetanus. — If from worms — by medicines which destroy them — if from hysteria, by the remedies for that disorder, taking care in each Case, to be governed by the states of the pulse. ——

The Hydrophobia from fear ~~Association~~ may be cured by exciting an idea that shall overpower the ~~cause~~ morbid action which fear has invited to the throat.

a Clergyman in New Jersey lately visited one of his parishioners who was hastning to the Grave with the

Hydrophobia. While he sat with him
he inadvertantly took up a pipe of tobacco which
the distracted man has just laid down,
& put it into his mouth, & smoked
with it for a few minutes. When he
came home he recollected what he had
done. The thoughts of it filled him with
horror. He was instantly affected with a
difficulty of swallowing & dread of water.
— ~~His~~ The Elders of his church were sent
for to console him. A Physician
~~—of~~ was sent for at the same time
who ~~upon~~ hear took a part in the
conversation of ~~the~~ his patient with
his friends, ~~but it was~~ his opinions
however were so heterodox, & so offensive
to ~~the~~ the Clergyman that he

V The Hydrophobia in all the cases last
y have been mentioned, seems to
be differs from the Hydrophobia state
brot on by the bite of a rapid Animal,
of fever in being a mere local disease,
or being accomp? with but a small
affection of the whole System. — Thus
we see ~~an inflam~~ a Inflammation of the Kid of the
malignant
Ubine from a fever, and the same
disease without fever from a Calculus
irritating the kidneys. In many other in-
-stances of affections being ~~local~~ Symptoms
of a general disease, or simply local
diseases might be mentioned. —

was thrown into a passion in hearing de
refuting them, by which means his
Hydrophobia was instantly cured. V

I have often complained of the want
of a new nomenclature on medicine.
— I have attempted it by dividing fevers
into stages according to its grades,
and seats. ~~To that attempt, permit~~
me the terms Hydrophobia convey
no other idea, than one of the symptoms

In a review of what has been
said of the Hydrophobic state of fever
the extension of the principle we
adopted respecting the Unity of the
proximate & remote causes of its
fever, also of the method of cure. Then
You will perceive further that
